BOOKKEEPING/AUTOMATION & ACCOUNTING

Combining the two will provide valuable financial insight

Bookkeeping/Automation

Record all business transactions into an accounting software to produce useful financial statements for owners or managers to make inform decisions

Accounting

Utilizing bookkeeping data to summarize, aanalyze, and advise the business owner. Allowing adjustments and improved profitability

Bookkeepers and accountants play two separate roles in a business financial process, but they do have things in common.

Bookkeeping / Automation

Sales/Revenue
Payroll processing
Vendor invoices
Bill payment
Record credit card purchases

Things they have in common

Reconcile financial transactions
Accounting knowledge
Financial data organization

Accountants

Validate & interpret data
Generate financial reports
Analyze reports
Review and advise clients

With the rise of technology, most bookkeeping task can be automated.

An accountant must validate and utilize the information to guide and advise the business owner.

With the utilization of bookkeeping automation, business owners can eliminate the guess work and make informed financial decision.
